Label Maker - How To- Guide

Quick Start

Requirements

- **Python 3.11** (must be this exact version)
- Windows OS

Installing Required Libraries

Open a terminal and run:

```
py -3.11 -m pip install pillow opencv-python pymupdf requests beautifulsoup4 customtkinter tkcale
```

Library breakdown:

Library	PyPI Package	Purpose
Pillow	`pillow`	Image processing
OpenCV	`opencv-python`	Computer vision, barcode reading
PyMuPDF	`pymupdf`	PDF handling (provides `fitz`)
Requests	`requests`	HTTP requests
BeautifulSoup	`beautifulsoup4`	HTML parsing
CustomTkinter	`customtkinter`	Modern UI widgets
TkCalendar	`tkcalendar`	Date picker widget
TinyDB	`tinydb`	Local JSON database
PyZipCode	`pyzipcode`	ZIP code lookup
Faker	`faker`	Fake data generation
python-barcode	`python-barcode`	Barcode generation
zxing-cpp	`zxing-cpp`	Barcode scanning

Library	PyPI Package	Purpose
tkinter-tooltip	`tkinter-tooltip`	Tooltip widgets
py-machineid	`py-machineid`	Machine ID generation

> **Note:** `tkinter` comes built-in with Python. If you get tkinter errors, reinstall Python 3.11 with the "tcl/tk" option checked.

Running the Application

1. Open a terminal/command prompt
2. Navigate to the tool folder:

   ```
   cd to "label\label_maker_2_5.exe_extracted"
   ```

3. Run the patched launcher:

   ```
   py -3.11 run_patched.py
   ```

The application window will open.

What This Patched Version Does

Feature	Status	Description
License Check	✅ Bypassed	No license key needed
Data Logging	✅ Blocked	Your label data is NOT sent to any server
Tracking Lookup	⚠️ Limited	Auto-fill from tracking# may not work (see below)
Label Generation	✅ Works	All label types should work normally

---

Using the Label Maker

Creating a UPS Label

1. Select the **UPS** tab
2. Fill in the shipping information:

    - Ship To Name
    - Ship To Address
    - Ship To City, State, ZIP
3. Enter a tracking number (or generate one)
4. Click **Generate Label**
5. Labels are saved to the `modified_labels/` folder

Creating a FedEx Label

1. Select the **FedEx** tab
2. Fill in shipping details
3. Click **Generate Label**

Creating a USPS Label

1. Select the **USPS** tab
2. Fill in shipping details
3. Click **Generate Label**

Creating a Canada Post Label

1. Select the **Canada Post** tab
2. Fill in shipping details including Province and Postal Code
3. Click **Generate Label**

Tracking Number Lookup (Limited)

The original app had a feature to auto-fill city/state/zip from a tracking number.

Current Status: This feature may not work because:

- UPS/FedEx/USPS block automated lookups
- The original developer's API is blocked (for privacy)

Workaround: Simply type the city, state, and ZIP manually.

Optional: Enable Tracking Lookup

If you want tracking lookup to work, you can:

1. Sign up for EasyPost API (requires $20 deposit): https://app.easypost.com/signup
2. Edit `tracking_scraper.py` line 15:

   ```
   EASYPOST_API_KEY = 'your_api_key_here'
   ```

Output Files

Generated labels are saved to:

```
label\label_maker_2_5.exe_extracted\modified_labels\
```

Troubleshooting

"Python not found" or wrong version

Make sure Python 3.11 is installed:

```
py -3.11 --version
```

Should show `Python 3.11.x`

App crashes on startup

Check the console output for error messages. Common issues:

- Missing dependencies
- Wrong Python version
- Corrupted files

Generate Label button doesn't work

1. Make sure all required fields are filled in
2. Check the console for error messages
3. Try a different label type to isolate the issue

"Module not found" errors

The app needs all its dependencies in the correct folders. Make sure you haven't moved or deleted any files.

File Structure

```
label_maker_2_5.exe_extracted/
├── run_patched.py          # ← Run this file
├── edit.pyc                # Main application (compiled)
├── tracking_scraper.py     # Local tracking lookup module
├── resources/              # Images, fonts, templates
├── modified_labels/        # Output folder for generated labels
└── PYZ-00.pyz_extracted/   # Application dependencies
```

Privacy & Security

This patched version includes these protections:

1. **No data sent to labelmaker.cc -** The original app logged all your label data (names, addresses, tracking numbers) to the developer's server. This is now blocked.
2. **No license verification -** Works offline without contacting any server.
3. **All processing is local** - Labels are generated on your computer only.

Advanced: Console Messages

When running, you'll see messages like:

```
[*] Label Maker Patcher
[*] Python version: 3.11.x
[*] Patched requests.post()
[INTERCEPT] POST to: https://...
[BLOCKED] Logging API call blocked
[BYPASS] Returning fake license response!
```

These are normal and show the patches are working.

Support

This is a patched/modified version. For issues with the patches, check:

- Console output for error messages
- That you're using Python 3.11
- That all files are in the correct locations
